

DIGITAL INTEGRATION SERVICES

All roads lead to Rome. In your IT, too?!

By using our integration services, you can rely on years of experience in introducing and maintaining data quality in large companies, as well as on reliable partnerships with innovative vendors. The resulting solutions are characterised by attractive licensing costs, low maintenance costs, expert knowledge and flexibility. Based on our German locations we consider current data security requirements and guarantee a competent customer-oriented consulting service on site.

The first step is an assessment that transparently lists the costs you currently incur for managing your legacy applications. The costs for infrastructure, software licenses, personnel and operation are included. Following this, we recommend a pilot (POC) with final planning of the overall implementation in the form of a strategic roadmap.

All digital transformations require new interfaces to old or existing IT systems. These interfaces are either man-to-machine or machine-to-machine interfaces. Our selected technologies allow us to set up both types of interfaces very quickly and extremely efficiently.
